

NexusArena

Competitive Esports Tournament Platform

Assets Document

Client: NexusArena Pvt. Ltd. | Project ID: WD-001 | June 2026

Section 1 - Supported Game Titles

The platform must support exactly the following five game titles at launch. No additional titles may be added and no titles may be removed.

#	Game Title	Required Assets
1	Valorant	Dedicated leaderboard page, tournament section, game label on cards
2	FIFA	Dedicated leaderboard page, tournament section, game label on cards
3	Chess	Dedicated leaderboard page, tournament section, game label on cards
4	Call of Duty	Dedicated leaderboard page, tournament section, game label on cards
5	Clash Royale	Dedicated leaderboard page, tournament section, game label on cards

Each game title requires: a dedicated leaderboard page / a filterable tournament section / a game title label on all tournament cards and detail pages.

Section 2 - Tournament Formats

The platform must support exactly three tournament formats.

1. Single Elimination

Players are eliminated after one loss. Bracket size must be the next power of 2 above the registered player count. Byes are assigned randomly to fill empty bracket slots.

2. Double Elimination

Players are eliminated after two losses. A winners bracket and a losers bracket must both be generated. Byes are assigned randomly where needed.

3. Round Robin

Every registered player plays against every other registered player once. Final ranking is determined by total wins, then total games played.

Section 3 - User Roles

The platform must implement exactly three user roles.

Role	Assignment	Key Permissions
Player	Default on registration	Browse, search, join, and withdraw from tournaments; view brackets and leaderboards
Organiser	Any verified player who creates a tournament	Manage tournament, create/edit/cancel own tournaments; trigger brackets; submit results
Admin	Assigned manually (not self-assignable)	View/delete any user; view/remove any tournament; view platform statistics

- Unverified accounts cannot join or create tournaments.
- Admin accounts cannot participate in tournaments.
- Organiser permissions apply only to tournaments that user created.

Section 4 - Email Notification Events

All emails must be sent within 5 minutes of the triggering event.

Event	Trigger	Recipients	Required Content
Registration Confirmation	Player registers for a tournament	Registering player	Tournament name, start date, organiser name
Tournament Start	Tournament start date is reached	All registered players	Tournament name, bracket link
Match Result Submitted	Organiser submits a match result	All players in the match	Tournament name, round, win/loss per player
Tournament Completion	Organiser declares final winner	All registered players	Tournament name, winner username, final bracket link
Tournament Cancellation	Organiser cancels before start	All registered players	Tournament name, cancellation reason if provided

Section 5 - Field Validation Rules

The following validation rules must be enforced across all forms.

Field	Rule
Username	3–20 characters; alphanumeric and underscores only; must be unique
Email	Standard email format; must be unique across all users
Password	Minimum 8 characters; at least one uppercase, one lowercase, one number
Tournament Name	Maximum 60 characters; no HTML tags permitted
Slot Limit	Integer only; minimum 4, maximum 128
Rules Text	Plain text only; maximum 1000 characters
Prize Pool	Numeric only; greater than zero if entered; optional field
Avatar	PNG or JPG format only; maximum file size 2 MB

Section 6 - Admin Dashboard Statistics Definitions

The following three statistics must appear on the admin dashboard.

Statistic	Definition
Total Registered Users	Count of all user accounts in the database regardless of verification status
Total Tournaments Created	Count of all tournament records regardless of status (open, ongoing, completed, cancelled)
Total Matches Completed	Count of all bracket matches that have had a result submitted by an organiser

Section 7 - Technology Stack Specification

Layer	Specification
Frontend	React.js v18 or later; component library is free-choice (Material UI, Chakra, Tailwind or plain CSS)
Backend	Node.js with Express.js
Database	MongoDB with Mongoose ODM
Authentication	JWT tokens stored in HTTP-only cookies; token expiry 7 days
Email Delivery	Any free-tier transactional service (Nodemailer + Gmail SMTP, SendGrid free, Mailgun sandbox, or others)
Deployment	Frontend and backend may be deployed separately or together; accepted platforms Vercel, Netlify, Heroku, etc.
Public Access	Deployed URL must be publicly accessible without login or VPN
Password Reset Link	Expires after 24 hours from time of issue
